Dear Don,

We talked on the phone about the having the spar stock that I have on order planed on the butt ends to accomodate the 1/16 plywood reinforcements that must be installed. I understand that there will be an additional fee. I have ordered the following spar material surfaced on 4 sides and conforming to the mil. spec. S-6073 since these will be installed on a certificated aircraft:

1 piece 4-7/16" x 5/8" x 195" sitka spruce  
2 pieces 5-15/16" x 3/4" x 195" sitka spruce

All dimensions except 195" have a tolerance of + 1/32" and - 0". I ordered 195" lengths which are the required spar length. Perhaps this was a mistake and I should have ordered 196" lengths. Please change my order to 196" lengths.

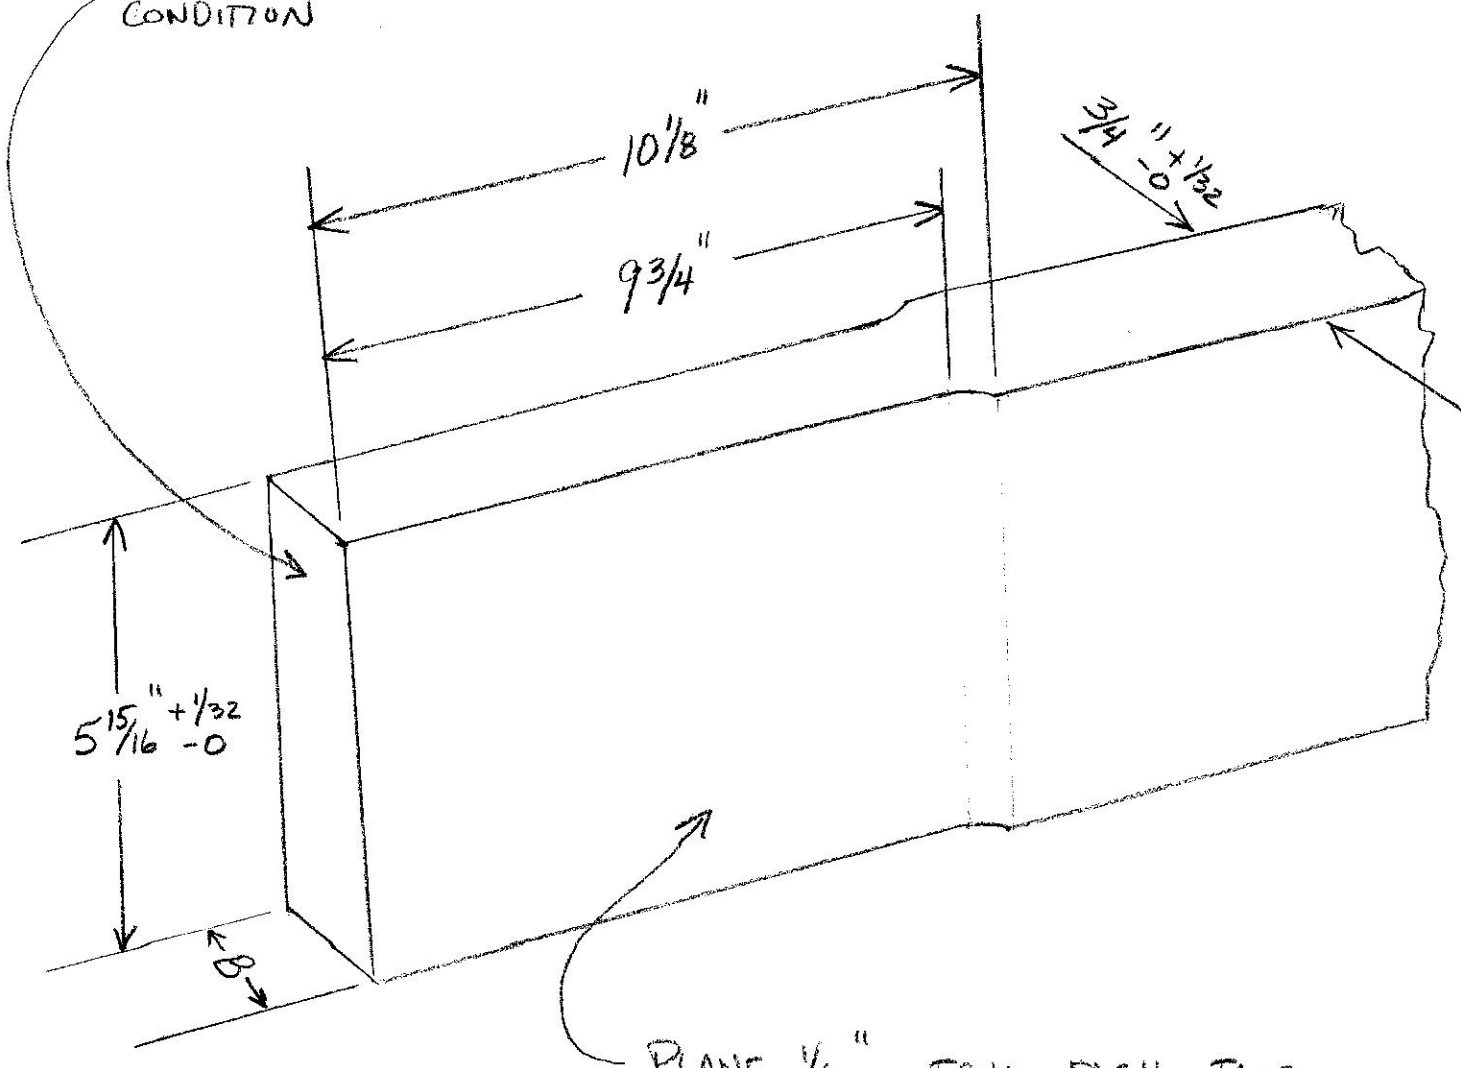

I have enclosed sketches to illustrate the planing that I am requesting. Please call me collect when you review the sketches so we can discuss them. My number is 914-473-0713. It is my home number so call after 5:00 pm EST or call collect and leave a message with my wife for me to call you. Thanks for your help and consideration.

Sincerely,

David L. Rude
