

BC12D Inspection ring approximate locations

Notes:

- This is a view of port wing from underside; stbd wing will be mirror image.
- Locations are approximate
- Based on 15-rib, 36-ft span, 6 compression rib, flapless models.
- Two rows of 6 rings are at the compression strut/spar intersections for inspection/adjustment of drag & antidrag wires.
- One ring beneath aileron actuator mechanism for inspection & lubrication.
- Some models(e.g. welded steel aileron brackets, rather than the cast type) will also require inspection hatch on top surface for lubrication of aileron bellcrank. This info not included.
